Summary:

Advantages:

- **Easy to navigate through the user interface**

Disadvantages:

- **Pretty heavy on ram usage, especially when scanning.**
- **Custom file scan can be very VERY slow**
- **It's been in BETA for a Long time now, I think over a year, since it's a new antivirus!**
- **VERY low detection Rate**
- **Horrible Web protection**
- **Back up protection is not good!**

According to my review, it basically failed on everything. My whole desktop completely changed with different fonts on each icon, my wallpaper changed to okoza.com, every time I close some programs it keeps popping back up. It created its own gadget that takes up half of the desktop that's telling things about wallpapers and Facebook. Also, all of sudden, things just got darker on my desktop. My laptop fan is just going to stay on until I clean up the vmware with hitmanpro and malwarebytes. Hitmanpro found 3 Riskware, 1 Trojan, 1 suspicious file and a whole bunch of screwed up registry keys. Malwarebytes found 3 Rogue. PowerPC, 8 Pup.Software, 1 Trojan, and 2 Adware. I definitely do not recommend this antivirus to anybody because it failed so badly and like I said, I think it's never going to have a final release. I hope this company improves quickly and dramatically or it's too late for them.
