# Dr. Web Security Space 8.0 (Updated and Default Settings)   Malware Security

User Interface:
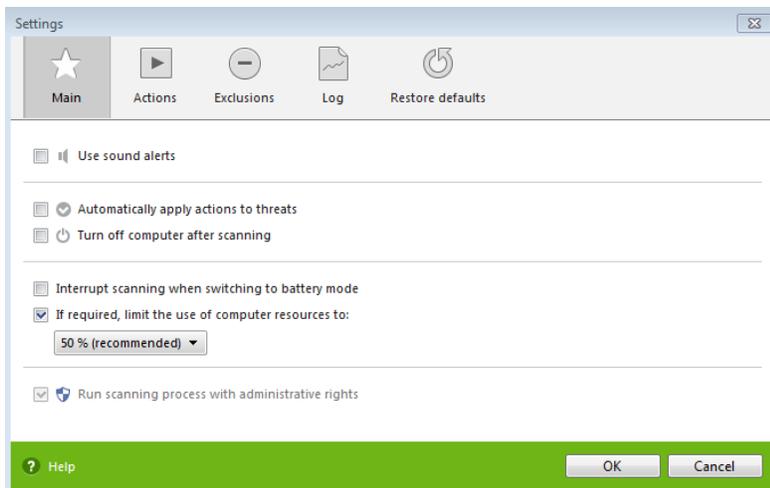

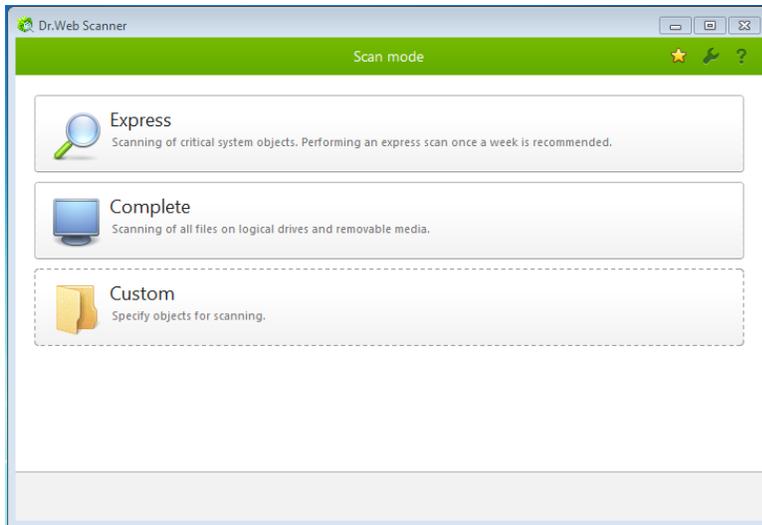

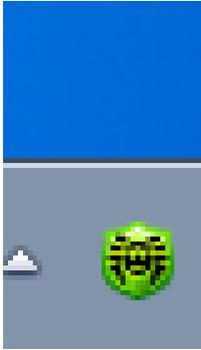

You got to right click it to see the user interface because dr.web does not come with one. I couldn't snip a pic while I had it right clicked because it disappears when I try to snip a pic.

System Memory:

- **10 Running Process**
- **80 Megabytes of ram**
- **Not slow on the system**

Malware Pack Containing 101 Files (3 Day Old Files):

86/101 Files detected = 85.15%

Caught Later By Behavioral Blocking, Firewall, Etc.:

- **Detected 3 out of 6 Files tested in malware pack!**
- **The missed 3 files that Dr. Web behavioral blocking did not detect are underneath these words!**

Hitmanpro and Malwarebytes results right after tested missed executed files in malware pack:
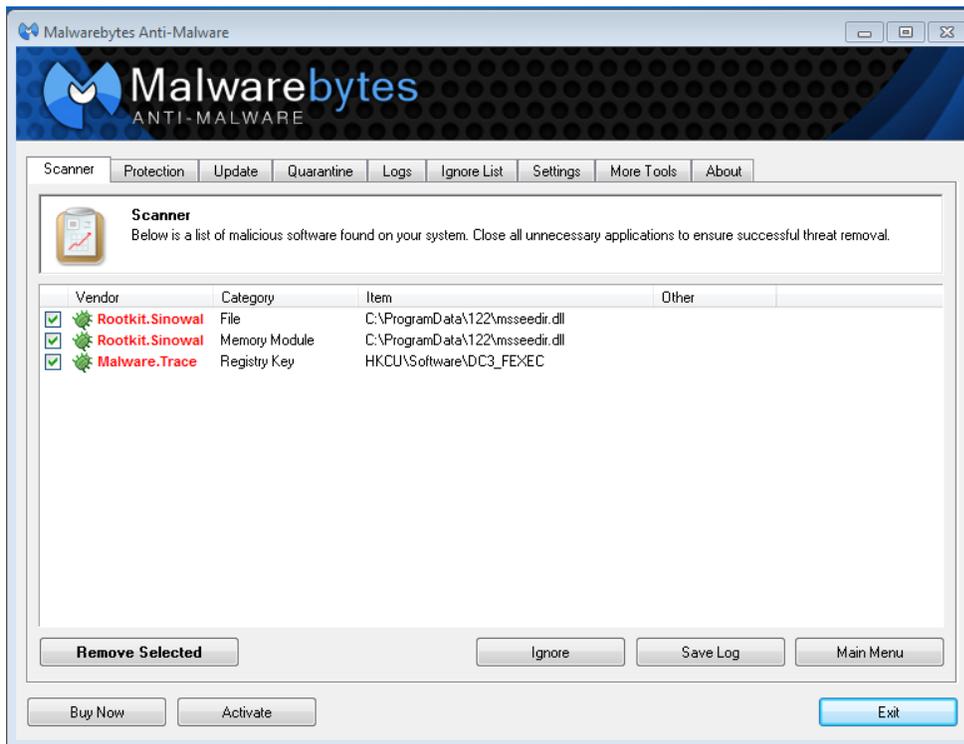

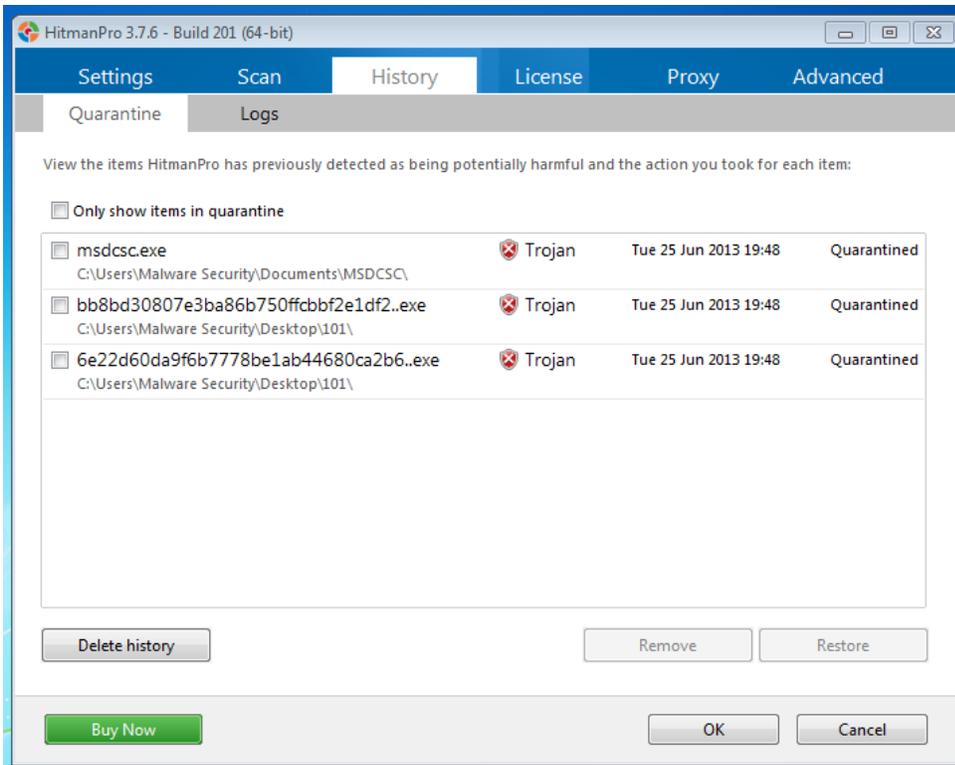

5 Star Rating:

- **1 Star: User-friendly:**   **1/1 Star (It's still user friendly because when you right click on the icon, everything is there like update, settings, etc.)**
- **1 Star: Low Ram Usage, 60mb or less:**   **0/1 Star**
- **1 Star: 24/30 Web Links, 80%:**   **1/1 Star**
- **1 Star: Detection 85%+:**   **1/1 Star**
- **1 Star: Behavioral Blocking, 50%+:**   **1/1 Star**

4/5 Stars

Summary:

Advantages:

- **User friendly interface, but still needs a normal user interface like the rest of antivirus's!**
- **Good on web blocking**
- **Good detection rate, but still could've done better since files are 3 days old!**
- **Behavioral blocking seems to work!**
- **Pretty quick custom scan and removal!**

Disadvantages:

- Pretty high ram usage

Let's see here, according to my testing's, Dr. Web seem to do its job, especially on web blocking. Even though their own style of user interface is easy to navigate through, you still need a nice user interface like Kaspersky, eset, Norton, etc. I would recommend this antivirus to users because it did its job.

Thanks for reading!
