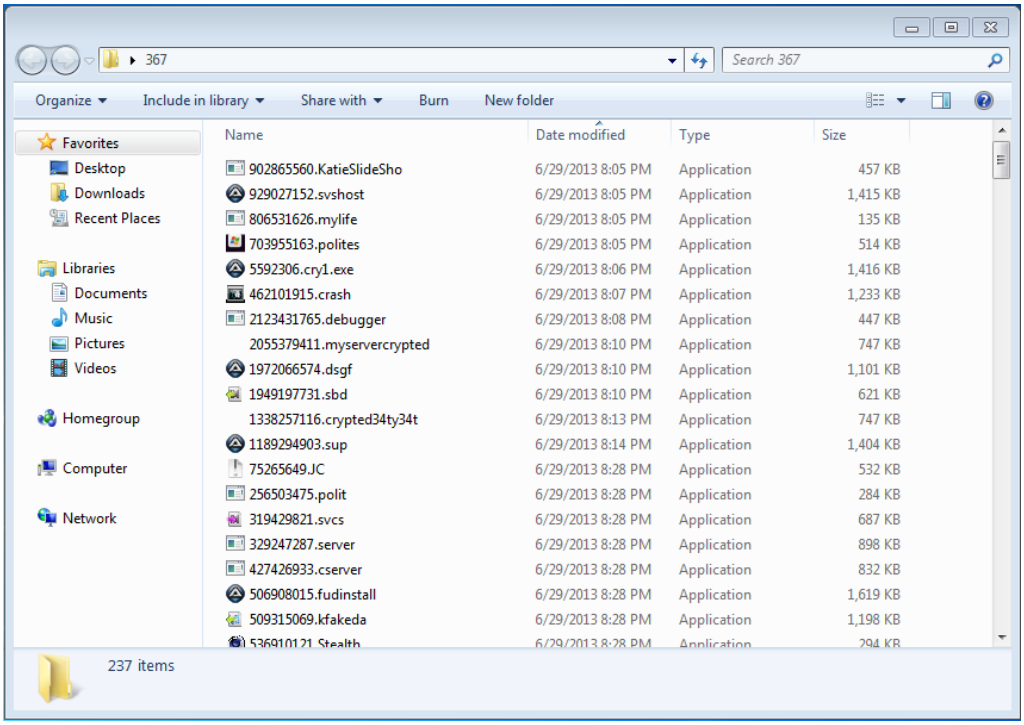
Malware Pack Containing 367 Files (3 Day Old Files):

130/367 Files detected = 35.42%

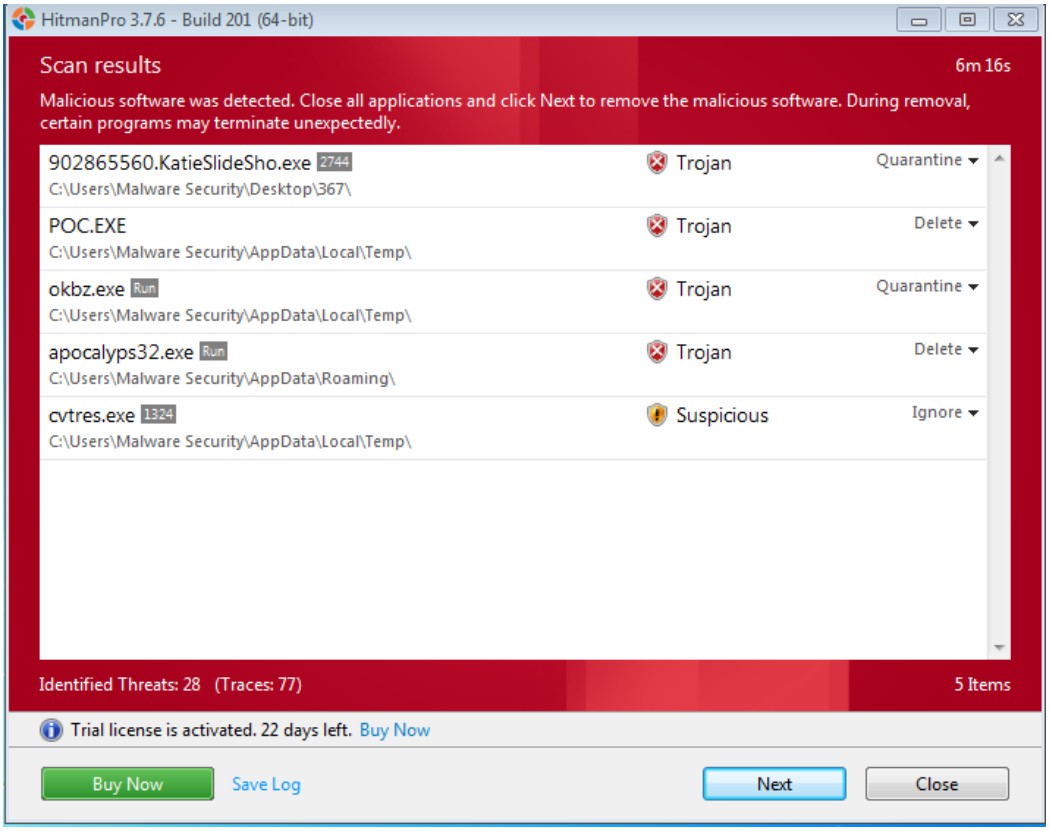


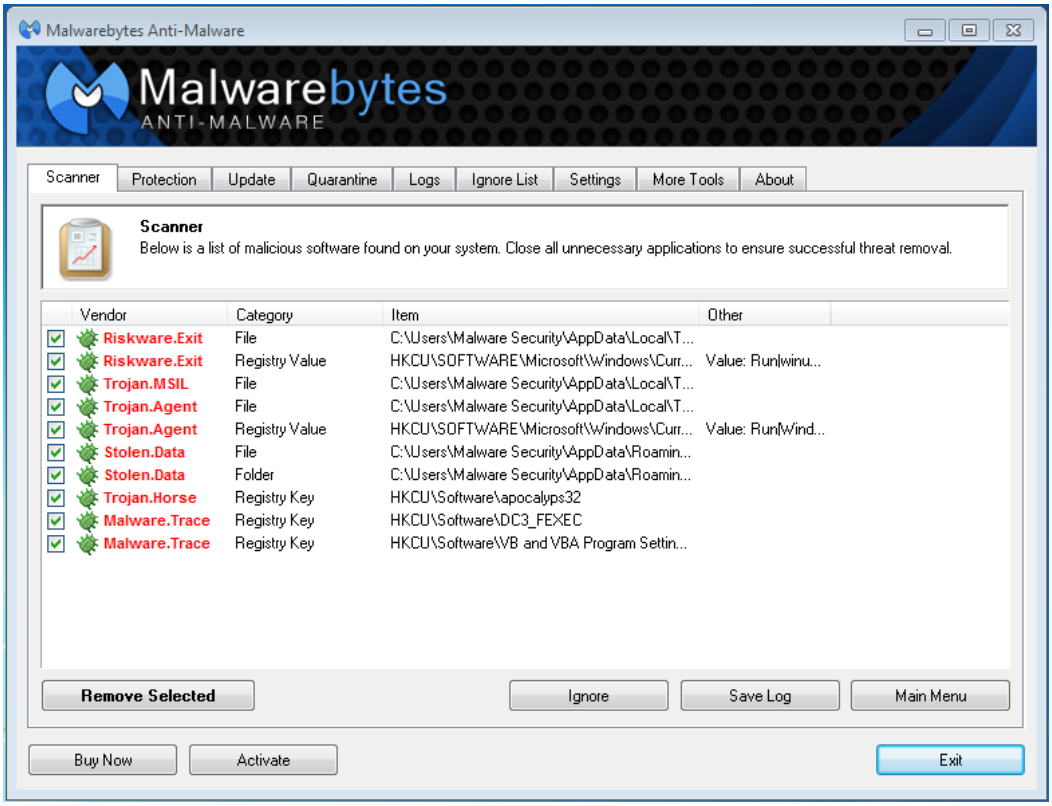
Caught Later By Behavioral Blocking, Firewall, Etc.:

- **1 out of 6 files detected in malware pack**

- **One of the missed file had a chat box that popped up threating me that if I don't chose 1 of the options, it's going to be the easy way or the hard way if I don't cooperate, but of course I didn't choose one of the options, so it said "you chose wrong." My physical computer cd tray started to open couple times and the vmware desktop started disappearing, but luckily I had hitmanpro running and it took care of the problem.**

Hitmanpro and Malwarebytes results after behavioral blocking test:





5 Star Rating:

- **1 Star: User-friendly: 1/1 Star**
- **1 Star: Low Ram Usage, 60mb or less: 0/1 Star**
- **1 Star: 24/30 Web Links, 80%: 0/1 Star**
- **1 Star: Detection 85%+: 0/1 Star**
- **1 Star: Behavioral Blocking, 50%+: 0/1 Star**

1/5 Stars

Summary:

Advantages:

- **Easy User interface**
- **Quickest scanning and removal I've seen!**

Disadvantages:

- To heavy on Ram
- Unexcitable web blocking for a paid program!
- Horrible detection rate on 3 day old files
- Not Good behavioral blocking

According to my testing's, Zillya was an epic fail because my physical computer started acting up and the vmware started disappearing. I definitely would not recommend this antivirus until they improve dramatically.

Thanks for reading!
