System Memory:

- 4 Running Process
- 250 Megabytes of ram
- Not slow on machine because I have 3 Gigabytes of ram in Virtualbox, but if less Gigabytes on your PC, then it would probably freeze, especially on old PC!

Caught Later By Behavioral Blocking, Firewall, Etc.:

- I have ran 2 files until that second file called “big a** se**” caused a serious problem were all my applications disappeared from my desktop and my wallpaper was gone. I tried searching any kind of apps like hitmanpro, malwarebytes, ccleaner, snipping tool, etc. in the start menu, but it could not find it at all. Another problem is I wanted to scan with ZoneAlarm because that's the only app that seemed to be there, but the scan option was grayed out, i kept trying to turn on the antivirus back on to scan, but it kept turn off by itself. So i had to take 2 screen shots from my Linux system to prove to you guys the results. Also, ZoneAlarm of course did not detect the 2 files.

Hitmanpro and Malwarebytes results after behavioral blocking test:

- I could not scan with either of them because of the situation i ran into. Hitmanpro and malwarebytes were not located in my desktop. I wanted to download them again from the internet, but my web browser was gone to.

5 Star Rating:

- **1 Star: User-friendly: 1/1**
- **1 Star: Low Ram Usage, 60mb or less: 0/1**
- **1 Star: 24/30 Web Links, 80%: 1/1**
- **1 Star: Detection 85%+: 1/1**
- **1 Star: Behavioral Blocking, 50%+: 0/1**

3/5

Summary:

Advantages:

- Nice and easy user interface
- Good web blocking
- Detection rate was good
- Quick at scanning and removal
- Light on system, but could effect others if lower then 3 gigabytes of ram or old PC'S.

Disadvantages:

- Heavy on ram
- Not great on behavioral blocking since it caused a serious issue were as a regular user would not know what to do since web browser disappears and antivirus turning off by itself!

According to my testing's, ZoneAlarm did good on detection rate and blocking links, but the zero day, such as behavioral blocking, didn't seem to do anything. Even though it got a 3 out of 5 stars, I still would not recommend this antivirus to users because if 1 web link goes through, well lets just pray its not a serious one or else your system could get infected badly. I do hope they improve the disadvantages on the future releases in order for me to recommend it to users.

Thanks for reading!
